

Traffic and weather via XM Satellite Radio is a very good SAFETY tool when in town or on the road. XM offers services that are not available on other AM and FM stations. This is a subscription service and it should NOT be up to the BIG BROTHER such as the National Association of Broadcasters to DICTATE what I am permitted to hear. I choose to subscribe to this service because of the high quality of the programing that is offered. This my right to recieve these signals and XM satellites right to provide these services to the subscribers. I am asking you to to reject NAB's petition 04-160

Thank you
